The invention also relates to expression vectors and host cells comprising DNA encoding mouse neutral/alkaline ceramidase, the recombinant production of the ceramidase, an antibody against the ceramidase, and a method for controlling the ceramide content in cells and/or tissues by introducing the gene or its antisense nucleic acid into the cells and/or tissues. The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism. The present sequence represents the mature mouse neutral/alkaline ceramidase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a mouse neutral/alkaline ceramidase and to nucleic acids encoding it. The invention also relates to expression vectors and host cells comprising DNA encoding mouse neutral/alkaline ceramidase, the recombinant production of the ceramidase, an antibody against the ceramidase, and a method for controlling the ceramide content in cells and/or tissues by introducing the gene or its antisen nucleic acid into the cells and/or tissues. The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism. The present sequence represents the mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mammalian neutral/alkaline ceramidase applicable as lipid reagent for studying structure and functions of ceramide a developing drugs for diseases associated with ceramide met

                                                                                                           hyperproliferative diseases. Ceramidase gene can be used as an immunogen to generate antibodies which are useful for diagnosis, prevention and treatment of hyperproliferative diseases and for detecting ceramidase gene product in a biological sample. The hyperproliferative disorders include cancers and autoimmune disorders such as lupus nephritis, glomerular disease. Ceramidase gene is also useful in antisense therapy
                                                                                                                                                                            Geramidase protein and gene are useful for treating a disease or disorder involving cell over proliferation or sphingolipid signal transduction especially breast cancer, cardiovascular disorder or inflammation. Ceramidase protein and gene are useful for treating disorders involving deficient cell proliferation or growth e.g. neurodegenerative disorders (Alzheimer's disease), growth deficiencies and lesions. Ceramidase protein is also useful for diagnosis of and lesions. Ceramidase protein is also useful for diagnosis of
                                                                                                                                                                                                                                                                                                  Human mitochondrial ceramidase protein and gene, modulation of which useful for preventing and treating proliferative disorders e.g. cancerardiovascular disease, inflammation and neurodegenerative disorders
                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-AUG-2001.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    capable of detecting 1000 or more genes from Drosophila. The inventuation in the control of the capable of detecting 1000 or more genes from Drosophila. The inventuation in the capable of the development of the cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176 ABL30511), expressed DNA sequences (ABL18106 ABL30511) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequences (ABL01840 (ABB57737-ABB72072)

                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAZ06210) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 36 novel genes and their fragments (nucleic acid sequences: AAZ06219-Z06263; amino acid sequences AAX38386-Y38498) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypucleotides. Specific uses are described for each of the 36 polynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           07-JAN-1998;

The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism. The present sequence represents the mature mouse neutral/alkaline ceramidase
                                                                                                 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mammalian neutral/alkaline ceramidase applicable as lipid engineer reagent for studying structure and functions of ceramide as well a developing drugs for diseases associated with ceramide metabolism
                                                                                                                                      Human secreted protein, SEQ ID NO:

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic thromsome mapping procedures. They are used to obtain upstream

```

This polypeptide comprises the 185 kDa TccB insecticidal toxin protein of Photorhabdus luminescens W-14. Its sequence was deduced from a genomic DNA clone (AAT6849) and includes an isolated N-terminal peptide (see AAW17867). Claimed toxins of P. luminescens (see AAW17871, AAW17894-89, AAW17899-900, AAW18301-06) can be produced by recombinant DNA methods and applied to, or genetically engineered into, insect larvae food and plants for insect control. The toxins are particularly effective against Southern corn rootworm, Colorado potato beetle, Western corn rootworm, meal worm, boll weevil and turf grub (Coleoptera), beet armyworm, black cutworm, cabage looper, codling moth, corn earworm, European corn borer, tobacco hornworm and tobacco budworm (Lepidoptera), and are also active against the corte of the order (Lepidoptera) and are also active against the corn of the corn insects of the orders Hymenoptera, Diptera, Dictyoptera,

                    The present sequence represents a protein named TccB of the bacterium Photorhabdus luminescens (W-14). This is a symbiotic bacterium of the nematodes of the Heterorhabditis genus. The bacterium has at least 4 distinct genomic regions, tca, tcb, tcc, and tcd. Peptide products are produced from these regions that are associated with insecticidal activity. The native toxins are secreted proteins. The proteins are toxic to insects upon exposure and especially when injected. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Photorhabdus luminescens W-14; nematode; symbiotic;

                                                                                                                                                                                                                                                                                                                                                         clone detailed in the descriptor line. The gene can be used to general fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAZ06210) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 36 novel genes and their fragments (nucleic acid sequences: AAZ06219.206263; amino acid sequences AAX38386-Y38498) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 30 polynucleotides, based on which tissues they are most highly expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; secreted protein; fusion protein; gene therapy; protein therapy; diagnosis; tissue; cancer; tumour; neurodegenerative disorder; leukaemia; developmental abnormality; foetal deficiency; blood; allergy; renal; immune system; asthma; lymphocytic disease; brain; hepatic; lymphoma; inflammation; ischaemic shock; Alzheimer's disease; restenosis; AIDS; cognitive disorder; schizophrenia; prostate; obesity; osteoclast; thymus; osteoporosis; arthritis; testis; lung; thyroiditis; thyroid; digestion; endocrine; metabolism; regulation; malabsorption; gastritis; neoplasm.

The invention relates to 36 novel genes and their fragments (nucleic acid sequences: AAX36219-Z06263; amino acid sequences AAX38386-Y38498) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 36 polynucleotides, based on which tissues they are most highly expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a secreted human protein encoded by the clone detailed in the descriptor line. The gene can be used to fusion proteins by linking to the gene to a human immunoglobulin portion (e.g. AAZ06210) for increasing the stability of the fuse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immune system; asthma; lymphocytic disease; brain; hepatic; inflammation; ischaemic shock; Alzheimer's disease; restenos cognitive disorder; schizophrenia; prostate; obeatit; osteoc osteoporosis; arthritis; testis; lung; thyroiditis; thyroid;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for blosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Buchrieser C, Frangeul L, Couve E, Rusniok C, Fsihi E, Dehoux P, Dussurget O, Chetouani F, Nedjari H, Glaser P, Kunst F, Cossart Daniels J, Goebel W, Kreft J, Kuhh M, Gg, Vazquez Boland JA; Dominguez-Bernal G, Garrido-Garcia P, Tierrez-Martinez A, Amend A, Chakraborty T, Domann E, Hain T, Berche P, Charbit A, Durant L; Perez-Diaz J, Baquero F, Garcia Del Portillo F, Gomez-Lopez N; Maduenio E, De Pablos B, Wehland J, Kaerst U, Entian K, Hauf J;

THE COMPLEMENT C2 WHICH IS PART OF THE CLASSICAL PATHWAY OF THE CUNCTION: COMPLEMENT SYSTEM IS CLEAVED BY ACTIVATED FACTOR C1 INTO TWO FRAGMENTS: C2B AND C2A. C2A, A SERINE PROTEASE, THEN COMBINES WITH COMPLEMENT FACTOR 4B TO GENERATE THE C3 OR C5 CONVERVASE.

LOADALYTIC ACTIVITY: CLEAVES C3 IN THE ALPHA-CHAIN TO YIELD C3A AND C5B. BOTH C3B. CLEAVES C5 IN THE ALPHA-CHAIN TO YIELD C3A AND C5B. BOTH CLEAVAGES TAKE PLACE AT THE C-TERMINAL OF AN ARCININE RESIDUE.

LISCASE: DEFECTS IN C2 ARE THE CAUSE OF C2 DEFICIENCY (C2D). THIS IS AN AUTOSOMAL RECESTVE DISEASE. DEFICIENT INDIVIDUALS HAVE AN INCREASED INCIDENCE OF SLE AND SLE-LIKE SYNDROMES.

J. CHARACTERIZED BY COMPLETE LOSS OF THE PROTEIN WHILE TYPE I C2D IS CHARACTERIZED BY A SELECTIVE BLOCK IN C2 SERETION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.
